LEONARD'S SUSTAINABILITY PRACTICES

We at Leonard Wholesale have a long-term commitment to becoming a sustainable company that's able to adapt to any market challenges. As a 'responsible corporate citizen', we are committed to our ecological and social environment.

FOOD

We are a strong supporter of locally grown Ontario produce. We work with reputable farmers who use governed agricultural practices; using pesticides and fertilizers prudently and who conserve energy and water. All produce that enters our warehouse is inspected to meet our 'quality standards'. All products are coded and traceable for RECALL purposes.

OPERATIONS

Leonard Wholesale operates a very efficient food service company. We are always ready to invest in modern technology, in order to improve our business. Our fleet consists of modern vehicles equipped to reduce fuel consumption and CO² emission. These vehicles are also equipped with temperature controlled refrigerated units and automotive engine shut offs to reduce idle temperatures.

OPERATIONS

We plan our daily routes efficiently to reduce total kilometers driven while maintaining route consistency.

At Leonard Wholesale we encourage our personnel to be both energy and water conservation conscious. We have implemented a recycling program throughout our operation for the reduction of solid waste and landfills. All vegetable scraps are separated for compost. We are currently considering more efficient programs for our offices and warehouse.

We use an active microbial agent for sewer treatment to break down any solid waste. We use ozonized water in our process operation to kill bacteria on contact. We use 100% recycled paper in our office. We are committed to continually educate our personnel on any environmental health and safety issues. We believe it's in everyone's best interests to create a 'happy, healthy, and safe work environment'.

Leonard Wholesale believe in preserving and protecting the environment, conserving natural resources and preventing pollution of all kinds.
